

Achieve Dose Flexibility in a Controlled-Release Tablet for the First Time Ever

Patent pending Accu-Break™ technologies create unique tablets that contain a drug-free break layer for easy and precise dose adjustments

Accu-T™ for Controlled Release Products

- ▶ Easily subdivide controlled-release tablets (CR) in half without changing the release kinetics of the whole tablet

- ▶ Unique and innovative dosing options for CR and immediate-release (IR) products

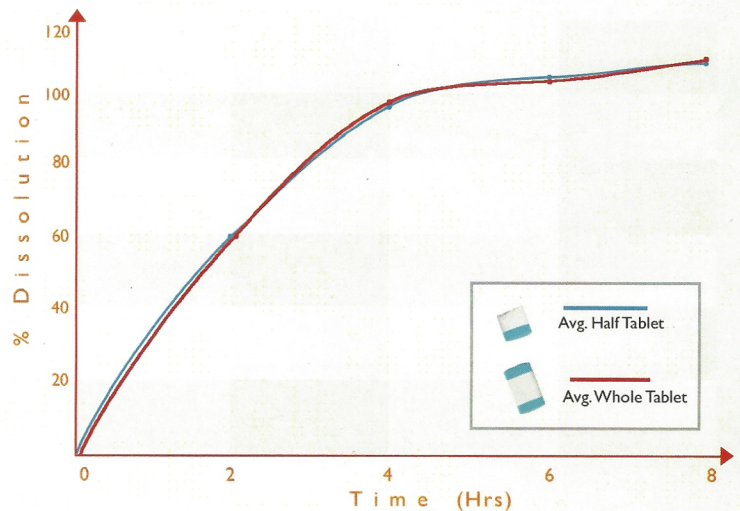

Scored drug-free break layer allows exact half doses of both release mechanisms

Ability to separate IR from CR and take appropriate mechanism

Dissolution (Whole vs. Half Tablet)*

* Data on file, Accu-Break Pharmaceuticals, Inc.

Clinically Relevant Competitive Advantages

- ✓ 100% dose accuracy when dividing
- ✓ Ability to titrate and dose-adjust controlled-release medications
- ✓ Ability to separate IR and CR components from each other and choose the desired release mechanism
- ✓ Patent pending technology

- Easy to swallow whole, easy to split if needed
- Low cost, low risk reformulations
- Innovative differentiator in controlled-release market
